
In the article “Mechanisms of platelet-activating factor (PAF)-mediated responses in the lung” by Stefan Uhlig, Rolf Göggel, Stephanie Engel. Pharmacol. Rep., 2005, 57, Supplement, 206–221, the sentence “Another attractive and possibly related hypothesis is that PAF acts via tyrosine phosphorylation of VE-cadherin, which is specifically expressed in tight junctions of endothelial cells and appears to control junctional stability [7].” on page 212 should have read: “Another attractive and possibly related hypothesis is that PAF acts via tyrosine phosphorylation of VE-cadherin, which is specifically expressed in adhesion junctions of endothelial cells and appears to control junctional stability [7].”
